

Colour Covering Blanket

M. Ivanovici, N. Richard, M. Turiac

WORLDCOMP'10
International Conference on Image Processing, Computer Vision,
and Pattern Recognition (IPCV'10)
Las Vegas, NV, 12-15 July, 2010

Overview

- Context
 - Characterization of the complexity of a colour texture
- Covering Blanket
 - For estimating the fractal dimension
- Colour Probabilistic Morphology
- Experimental Results
- Conclusions

IPCV 2010, Las Vegas, NV Madalina Turiac 2

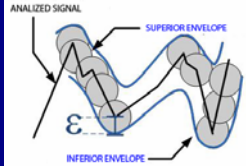

Context

- Colour texture characterization
 - 3D histograms
 - Co-occurrence matrices
 - Colour fractal dimension
 - HyperBox-counting
 - **Colour Covering Blanket**

IPCV 2010, Las Vegas, NV Madalina Turiac 3

Covering Blanket

- Compute the volume $V(\varepsilon)$ between the *superior* and *inferior* envelopes (morphological covers) of the analyzed image for different sizes of the structuring element ε

- Estimate the fractal dimension based on the slope of the regression line through the points:

$\langle \log V(\varepsilon), \log \varepsilon \rangle$

IPCV 2010, Las Vegas, NV Madalina Turiac 4

Morphological Covers

- Dilation and erosion for grey-scale images [Serra] with flat structuring elements (SE)

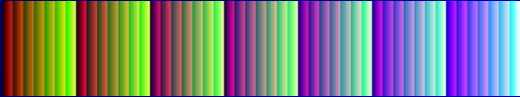

$$f \oplus g = \max_{y \in \text{Supp}(g)} \{f(x - y)\}$$

$$f \ominus g = \min_{y \in \text{Supp}(g)} \{f(x - y)\}$$
- Issue – for colour images – the definition of a total order in a 3D space
 - Hanbury & Lopez define lexicographical i.e. partial orders

IPCV 2010, Las Vegas, NV Madalina Turiac 5

Drawback of the Lexicographical Order

- Not “natural” order of colours
- Superior and inferior cover intersect
 - The volume has negative values!
- Example: RGB lexicographical order:

IPCV 2010, Las Vegas, NV Madalina Turiac 6

Probabilistic Extrema

- Chebyshev's inequality

$$P\{|\xi - \bar{\xi}| \geq k\sigma_\xi\} \leq \frac{1}{k^2}$$

- Extrema by definition:

$$\begin{aligned} \max\{\xi\} &\stackrel{\text{def}}{=} \bar{\xi} + k\sigma_\xi \\ \min\{\xi\} &\stackrel{\text{def}}{=} \bar{\xi} - k\sigma_\xi \end{aligned}$$

IPCV 2010, Las Vegas, NV

7

Colour Morphology

- The Dilation and Erosion

$$\begin{aligned} f \oplus g &= \overline{f(x-y)}_{|y \in \text{Supp}(g)} + k\sigma_{f(x-y)}_{|y \in \text{Supp}(g)} \\ f \ominus g &= \overline{f(x-y)}_{|y \in \text{Supp}(g)} - k\sigma_{f(x-y)}_{|y \in \text{Supp}(g)} \end{aligned}$$

$$\begin{aligned} \overline{f(x-y)}_{|y \in \text{Supp}(g)} &= (\bar{r}, \bar{g}, \bar{b}) \\ \sigma_{f(x-y)}_{|y \in \text{Supp}(g)} &= (\sigma_r, \sigma_g, \sigma_b) \end{aligned}$$

IPCV 2010, Las Vegas, NV

8

Volume Definition

$$V(\varepsilon) = \sum_{i=1}^M \sum_{j=1}^N \underbrace{[Sup_\varepsilon\{x(i,j)\} - Inf_\varepsilon\{x(i,j)\}]}_{v(i,j)}$$

$$v(i,j) = \Delta r \times \Delta g \times \Delta b$$

IPCV 2010, Las Vegas, NV

Madalina Turiac

9

Experimental Results

$\varepsilon = 3$ $\varepsilon = 5$ $\varepsilon = 7$ $\varepsilon = 9$ $\varepsilon = 11$

IPCV 2010, Las Vegas, NV

Madalina Turiac

10

Gray-scale Covering Blanket

- Better estimation of the fractal dimension

- The fractal dimension is underestimated using the classical morphology

IPCV 2010, Las Vegas, NV

Madalina Turiac

11

Experimental Results

$\varepsilon = 3$ $\varepsilon = 5$ $\varepsilon = 7$ $\varepsilon = 9$ $\varepsilon = 11$

IPCV 2010, Las Vegas, NV

Madalina Turiac

12

Experimental Results

$\epsilon = 3$ $\epsilon = 5$ $\epsilon = 7$ $\epsilon = 9$ $\epsilon = 11$

IPC V 2010, Las Vegas, NV Madalina Turiac 13

Color Covering Blanket

- Our approach provides more stable results
- Hanbury morphology → under-estimation of the fractal complexity

IPC V 2010, Las Vegas, NV Madalina Turiac 14

Comparison (2)

- More linear and stable behaviour compared to the colour Voss approach (box-counting like approach)
- CCB – under-estimation of the fractal complexity

IPC V 2010, Las Vegas, NV Madalina Turiac 15

Issues

- Marginal approach
- The statistically-estimated extrema
 - may not belong to the original set (new / false colours)
 - may not belong to the colour space (impossible to render or print)

IPC V 2010, Las Vegas, NV Madalina Turiac 16

Conclusions

- We don't define a partial order
- Extrema of a set – computed based on the mean and standard deviation
- The approach
 - colour extension of the covering blanket
 - suitable for metrological purposes
 - image complexity assessment performed in RGB

IPC V 2010, Las Vegas, NV Madalina Turiac 17
